Hyprup Implementation plan

Goal

Build a **demo-ready MVP** that clearly shows:

- Job Posting (Business)
- Job Browsing & Applying (Student)
- Basic Matching Flow

Focus on **Clarity + Flow + UI > Complexity** (Mukiyam da)

Core Strategy

- Keep it **simple but impressive**
- Show **real-world usability**
- Build **only what judges can see**
- Prioritize **demo experience over backend perfection**

Tech Stack (Fastest Setup)

- Frontend: React (or HTML/CSS/JS)
- Backend: Firebase (Auth + Firestore)
- Hosting: Firebase Hosting / Netlify

Team Roles

Frontend

- UI screens
- Navigation & user flow

Backend

- Firebase setup

- Database + logic

Design / Integration

- Figma screens
- UI polish + demo preparation

6-Day Execution Plan

DAY 1: Planning + UI Design

Tasks:

- Finalize flow:
  - Business → Post Job
  - Student → Browse → Apply
- Create screens:
  - Login Page
  - Student Dashboard
  - Business Dashboard
  - Post Job Form
  - Job List Page
  - Job Details Page

Output:

- Figma OR basic UI ready

DAY 2: Firebase Setup

Tasks:

- Create Firebase project
- Enable:
  - Authentication (Email/Google)
  - Firestore Database

Database Structure:

users

- id
- name
- role (student/business)

jobs

- id
- title
- description
- duration
- payment
- location
- createdBy

applications

- id
- jobId
- studentId
- status

Output:

- Backend ready

DAY 3: Core Feature 1 (Post Job)

Tasks:

- Business dashboard
- Job posting form
- Save data to Firestore

Output:

- Jobs stored in database

DAY 4: Core Feature 2 (Browse + Apply)

Tasks:

- Display job list
- Show job details
- “Apply” button

Logic:

- Save application in database

Output:

- Student can apply to jobs

DAY 5: Matching Flow + UI Polish

Tasks:

- Show "Applied" status
- Business sees applicants (basic list)
- Improve UI:
  - Colors
  - Cards
  - Buttons

Add (Optional but powerful):

- Rating UI
- Fake payment confirmation

Output:

- Complete flow working

DAY 6: Demo + Final Touch

Tasks:

- Add dummy data
- Fix bugs
- Smooth navigation

Record Demo Video (2–3 min):

Demo Flow:

1. Login as Business
2. Post a Job
3. Switch to Student
4. Browse Jobs
5. Apply
6. Show confirmation

Output:

- Demo video + working prototype

Demo Script (IMPORTANT)

“We built WorkHop, a platform that connects college students with nearby businesses for short-duration tasks. Here, a business posts a job, and within minutes, a student can discover and apply. This reduces hiring time drastically and creates flexible earning opportunities.”

WOW FACTORS (ADD AT LEAST 1)

- Festival use-case (Diwali rush)
- Real-world tasks (move items, assist customers)
- Clean UI (very important)
- Fast interaction (no lag)

Focus on demo clarity
Show real-world usage

Make UI clean and smooth

- Clean MVP
- Clear demo
- Strong explanation
